

Draft examination papers in isolated authoring environment, apply envelope encryption, and submit for institutional review.

Personal drafts, encrypted paper, dual approval progression, and cryptographic digest verification.

KEY CAPABILITIES:

- ✓ Isolated paper authoring environment
- ✓ Dual-approval workflow submission
- ✓ Zero exposure to centre decryption keys
- ✓ Authenticated AES-256 encryption pipeline
- ✓ Draft version tracking and history

Secure your examination workflow.

Protect the paper. Control access. Verify every critical action.

Get Started

MULTI-LAYER TOPOLOGY

Security Architecture

Three synchronized protection layers converging on a tamper-evident audit ledger.

Encryption

AES-256-GCM authenticated payload encapsulation. Sensitive binaries never touch public network memory or blockchains unencrypted.

Access Control

Whitelisted hardware terminal MAC addresses, centre subnets, and superintendent credentials required simultaneously.

Integrity

Cryptographic SHA-256 digests computed at authoring and verified byte-by-byte at physical download before decryption.

Blockchain Audit Ledger

IMMUTABLE PROOF

VERIFIABLE RECORD

A record you can verify.

Critical examination-paper events are recorded in a tamper-evident ledger while sensitive content remains securely off-chain.
